Patika/Very good was:

Visualisation of the topic; popular explanation of the question; windows; way of thinking, economy, copies, given info about passiv standard; practical examples like the own lecturer's house; presentation skills, good background, practical experience; Franz and Dieter with their personal experience and knowledge. Thank you!; information quality; Franz's basic principles explanation of PH, his example of own home; content; basic presentation of PHPP; deep knowledge of passive houses; information from real experience is very easy to relate to, understand and believe. Presenters were very good; good examples, good info; fenster einbaubeispiele; that presenters show how theory meets the practice

Nepatika/Very bad was:

Answers to people about the ideology of the passive house. Probably the brand should be redesigned; not having early morning coffee; too much stress on the frost bridges; [...]aluminium als baustoff in kg verkaufen

Semināra vietas izvēle/Quality of location:

Good, ventilation system could be better; good; good; good; good; perfect; not bad, but too early started; good; good; was ok, but a bit small for so many people. Acoustics are not great in LAS and sometimes difficult to hear; good; gut; OK; OK; it was moderate

Neizskaidrotie jautājumi/Open questions:

Air quality in the house, if the house is secured and [tight?], so home is not "breathing"; I'm thinking about daylight. In PH window openings and connection with outside (nature) is typically restricted - small. What is your suggested maximum % of windows area to make PH standard building. (Recently it was 20% from perimeter of the walls); information about polymeric materials used in windows; please educate LATVIAN government; air cooling in PH; paying too much attention to the cost efficiency and energy efficiency leads to bad design... Don't get wrong - the cost IS important
